AMBASADORI HOTEL-TILIS GEORGIA

The Ambassador Hotel is a 4 star luxury hotel, located in the historic center of Georgia's capital city Tbilisi. With its exterior lighting design the Hotel creates an eye-catching skyline facing the presidential palace.

The combination of Traxon Technologies LED solutions and e:cue's control system allowed the lighting design company Gelania to create a unique lighting scenario that can be controlled via a Smartphone.

e:cue's powerful LIGHTING CONTROL SERVER LCS1 and 36 BUTLERS provided the lighting control for the complete installation. LIGHTING APPLICATION SUITE (LAS) enterprise enables control of various lighting shows via a Smartphone application. Georgian President, Mikheil Saakashvili, has remote access control of the installation from his residence across the street. Traxon's high power wall washing XB-line and 66 String RGB systems, with total of 10.560 pixels, provide striking color-changing lighting effects on the building. Each string element consists of 32 individually controllable high performance LEDs.
