

# FIREKEEPERS CASINO

BATTLE CREEK, MI – USA

Firekeepers is one of the most visited and biggest casinos in Michigan featuring over 107,000 square feet of gaming space whereas the whole property covers 236,000 square foot.

The combination of Traxon Technologies and e:cue lighting control products make this casino a one-of-a-kind in-house media experience. The lighting control was provided by e:cue's Video Control Server and Media Engine 2 to deliver exciting video-to-lighting dynamic effects.

e:cue's Video Control Server features e:cue's video software tool Emotion replaying clips and videos while the Media Engine 2 controls massive number of DMX channels (over 310 DMX universes) including Traxon 64 PXL Mirror Wash RGB panels that were used to create a pixel explosion spanning an entire wall in the main gaming area, and Mesh RGB systems, which were used to create two large cubes which hang from the ceiling over the central gaming area.

Firekeepers' unique media lighting installation and over 2,680 state-of-the art slot machines and 76 table games make this casino one of the biggest entertainment spots in Michigan.
